

About our client

A leading company with 25 years of expertise in providing software solutions to many MNCs and government organisations. The vision of the company is to make the lives of people more comfortable.

Scope

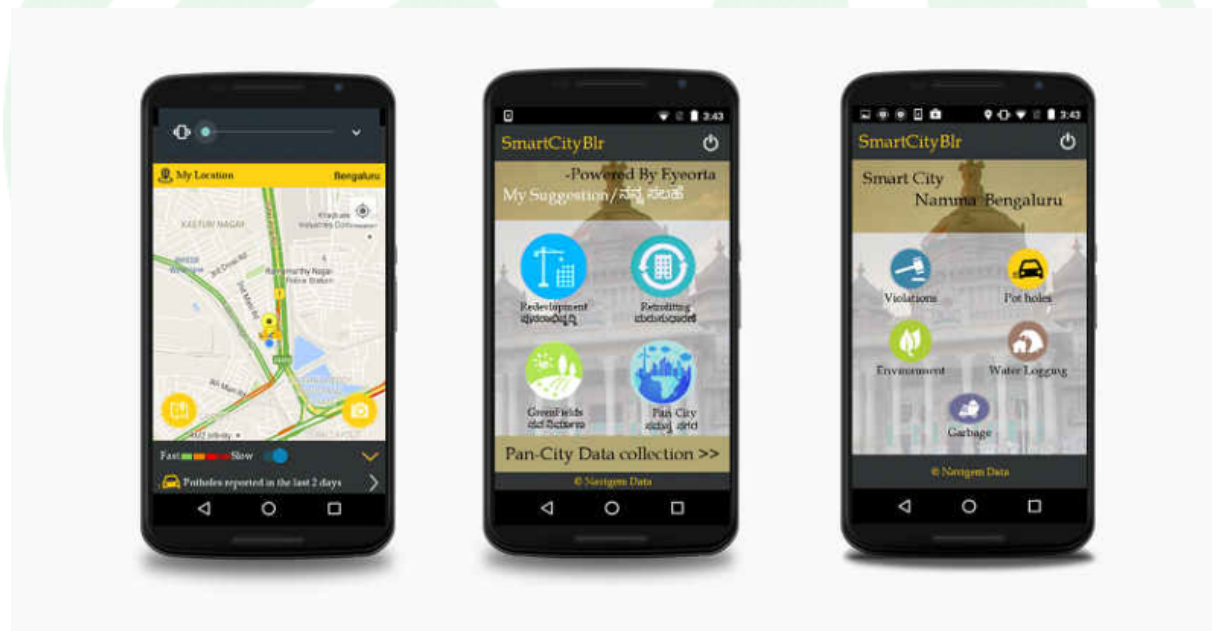

This project is part of the smart city initiation for Bengaluru city. This application helps the people in Bangalore to register and report complaints about their day-to-day issues like water lodging, garbage issues, potholes etc.

The problem

Handling huge traffic from the public during registering complaints.
Developing APIs to interface with the concerned Government organisations.
Linking the application with different social networks like Facebook, Twitter, WhatsApp etc.

Solution

We developed an application to handle the traffic while registering complaints. All the social networks were linked with the application which could interface with the concerned organisations.

Results

An application was created to register complaints regarding issues like water lodging, potholes, garbage issues etc. With the support of map location.

Technologies used

Front End - XML, Bootstrap

Back End - NodeJS

Android - Android Kotlin
